

## Packet Tracer – Configuring VPN Transport Mode

### Addressing Table

Device	Private IP Address	Public IP Address	Subnet Mask	Site
Private_FTP server	10.44.2.254	N/A	255.255.255.0	Gotham Healthcare Branch
Public_FTP server	10.44.2.253	209.165.201.20	255.255.255.0	Gotham Healthcare Branch
Branch_Router	N/A	209.165.201.19	255.255.255.248	Gotham Healthcare Branch
Phil's computer	10.44.0.2	N/A	255.255.255.0	Metropolis Bank HQ

### Objectives

**Part 1: Sending Unencrypted FTP Traffic**

**Part 2: Configuring the VPN Client within Metropolis**

**Part 3: Sending Encrypted FTP Traffic**

### Background

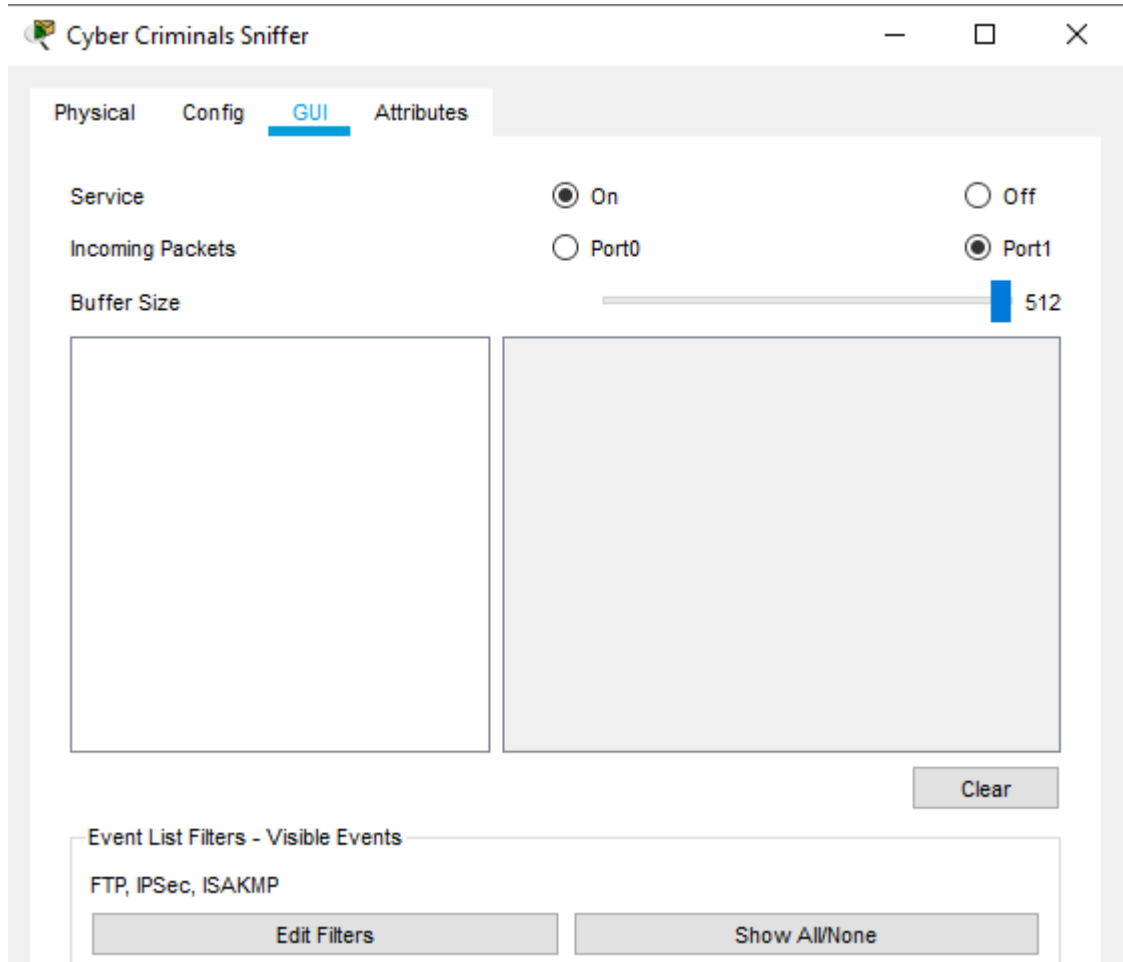

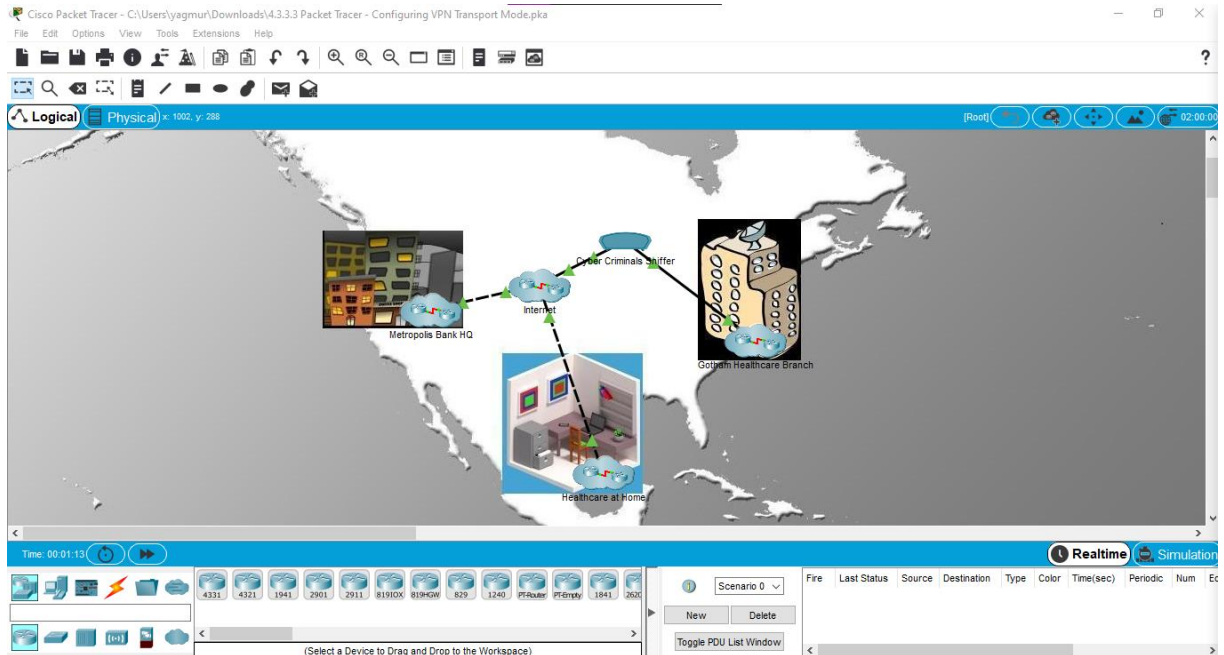

In this activity, you will observe the transfer of unencrypted FTP traffic between a client and a remote site. You will then configure a VPN client to connect to the Gotham Healthcare Branch site and send encrypted FTP traffic. The IP addressing, network configuration, and service configurations are already complete. You will use a client device within Metropolis Bank HQ to transfer unencrypted and encrypted FTP data.

## Part 1: Sending Unencrypted FTP Traffic

### Step 1: Access the Cyber Criminals Sniffer.

- Click the **Cyber Criminals Sniffer** and click the **GUI** tab.

## Packet Tracer – Configuring VPN Transport Mode

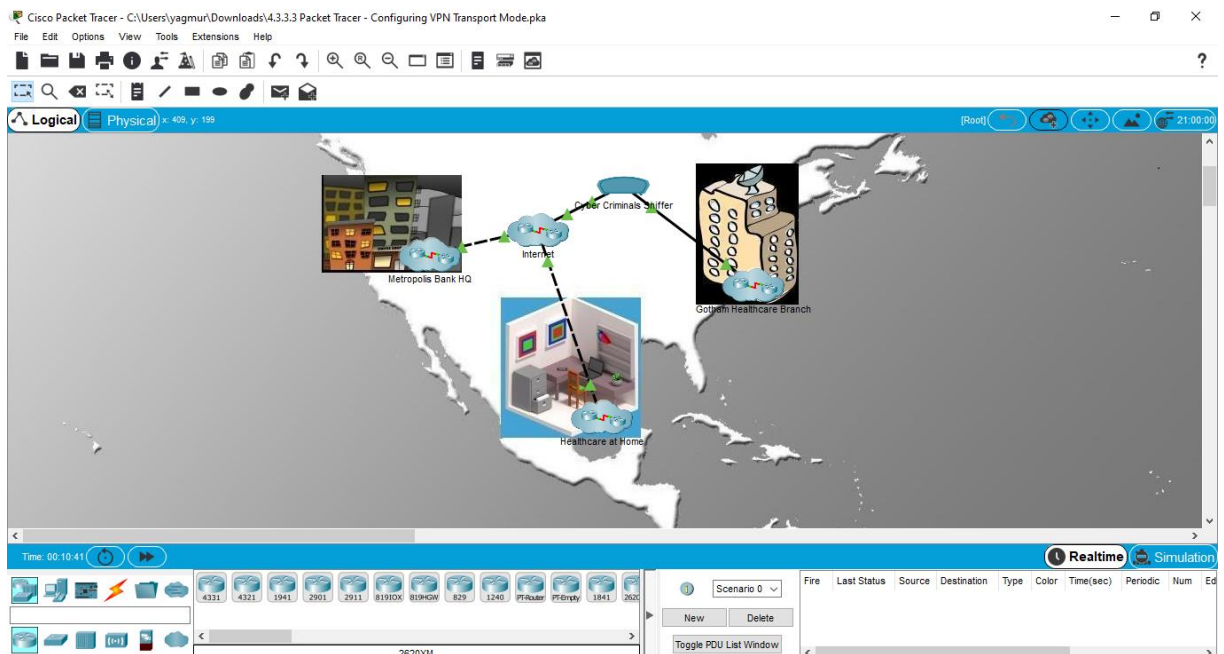

b. Click the **Clear** button to remove any possible traffic entries viewed by the sniffer.

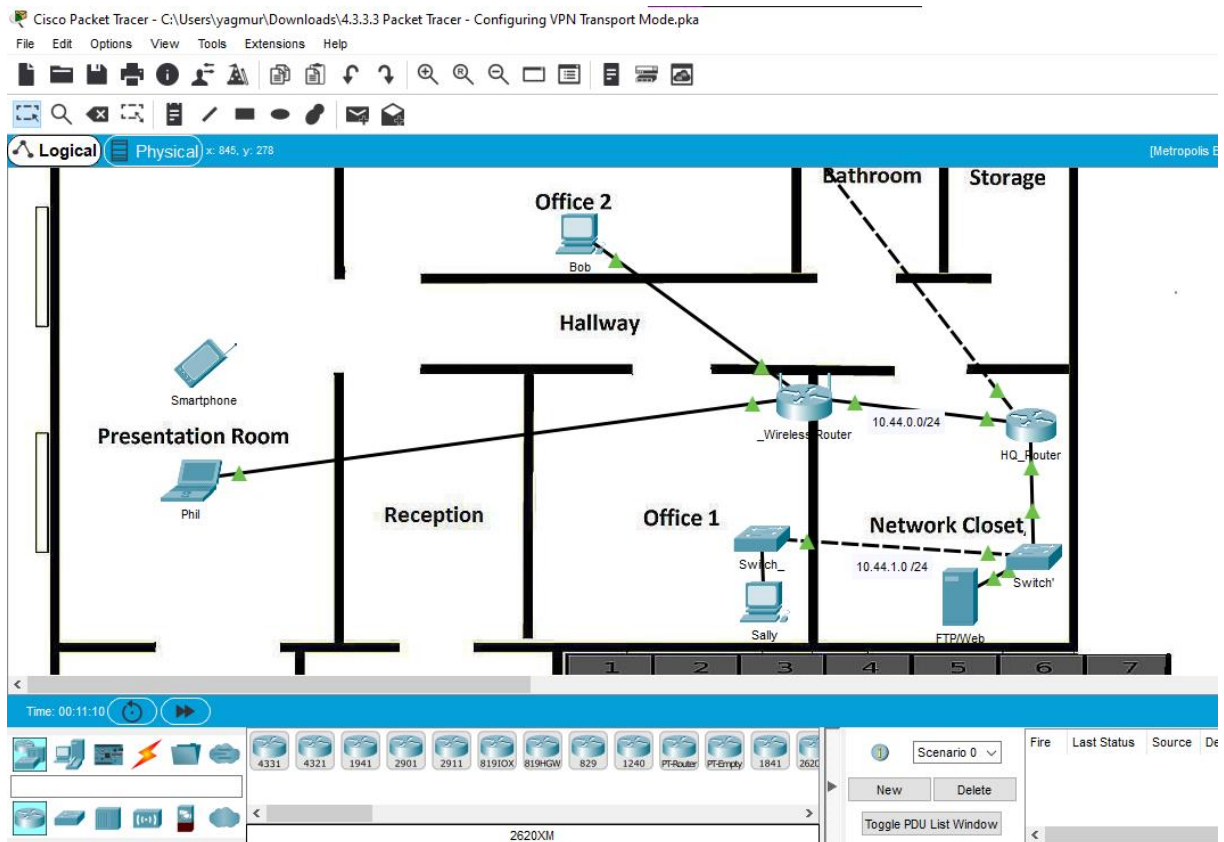

c. Minimize the **Cyber Criminals Sniffer**.

### Step 2: Connect to the Public\_FTP server using an insecure FTP connection.

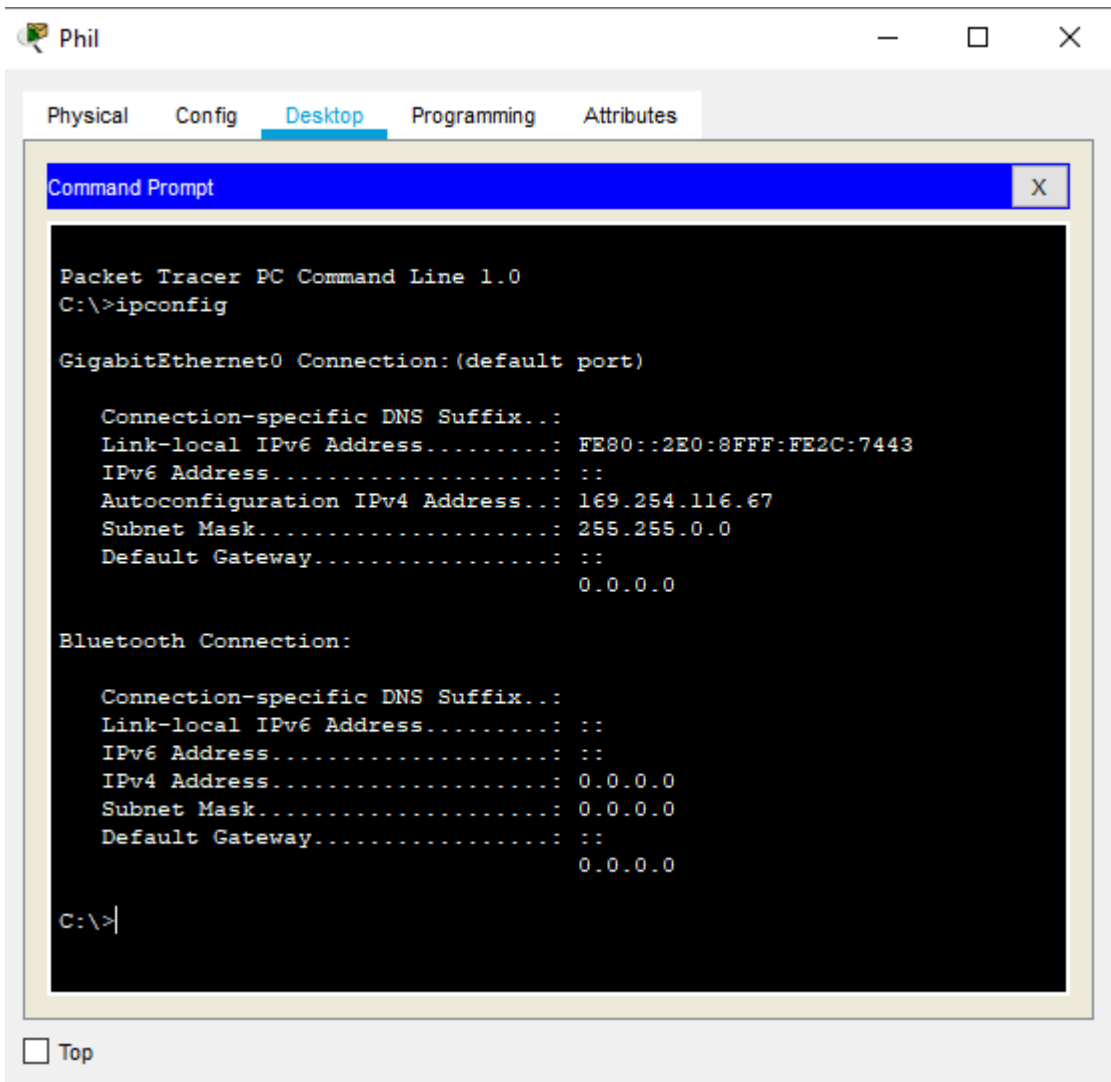

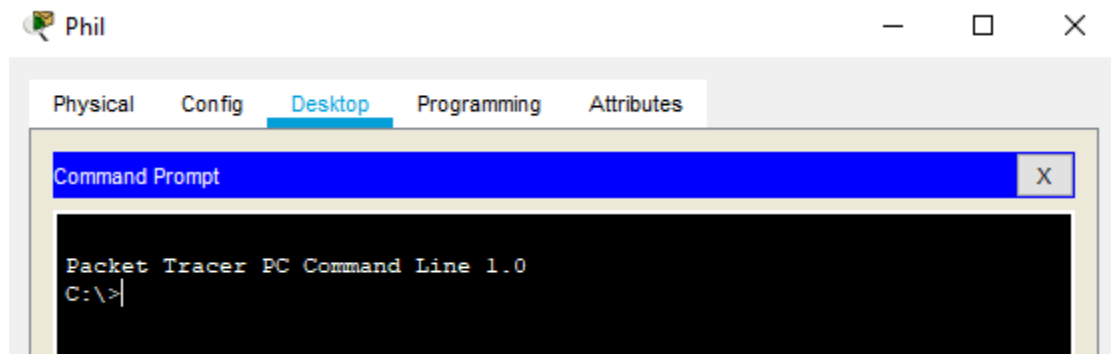

- a. Click the **Metropolis Bank HQ** site and click **Phil's laptop**.

- b. Click the **Desktop** tab and click on **Command Prompt**.

- c. Use the **ipconfig** command to view the current IP address of **Phil's** computer.

- d. Connect to the **Public\_FTP** server at **Gotham Healthcare Branch** by entering **ftp 209.165.201.20** in the command prompt.
- e. Enter the username of **cisco** and password of **publickey** to login to the **Public\_FTP** server.

```
C:\>ftp 209.165.201.20
Trying to connect...209.165.201.20
Connected to 209.165.201.20
220- Welcome to PT Ftp server
Username:cisco
331- Username ok, need password
Password:
230- Logged in
(passive mode On)
ftp>put PublicInfo.txt

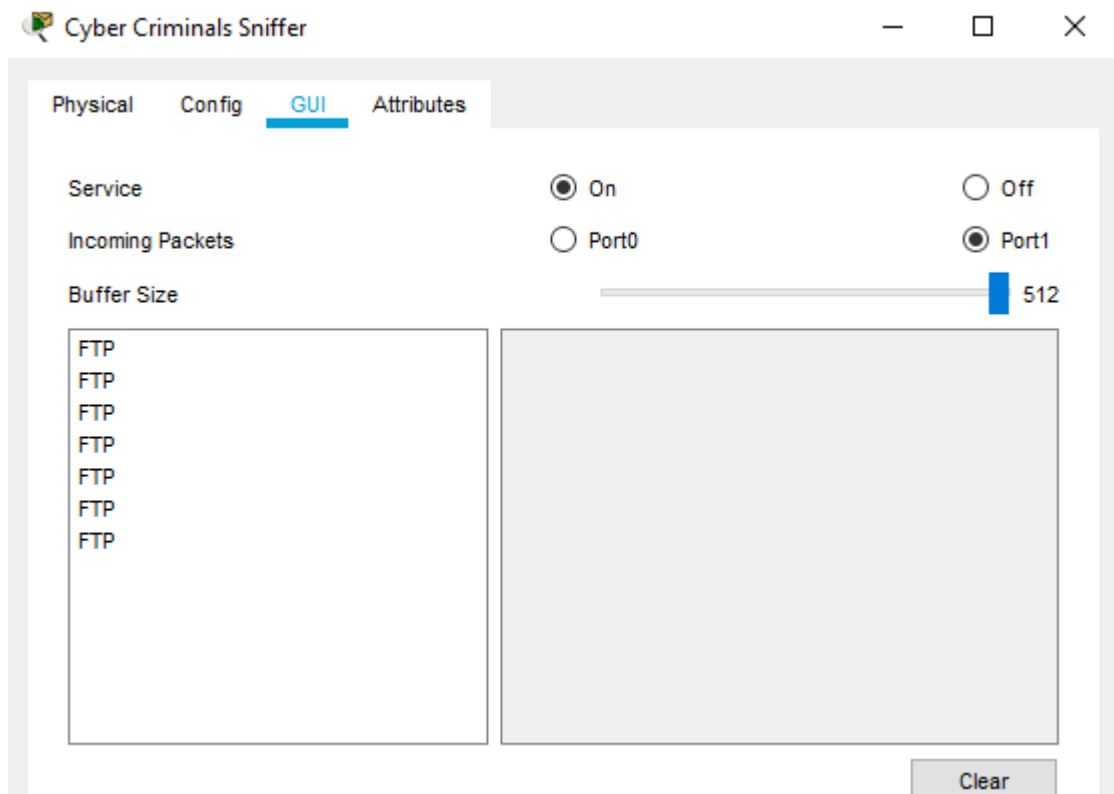

Writing file PublicInfo.txt to 209.165.201.20:
File transfer in progress...

[Transfer complete - 346 bytes]

346 bytes copied in 0.312 secs (1108 bytes/sec)
ftp>
```

☐ Top

- f. Use the **put** command to upload the file **PublicInfo.txt** file to the **Public\_FTP** server.

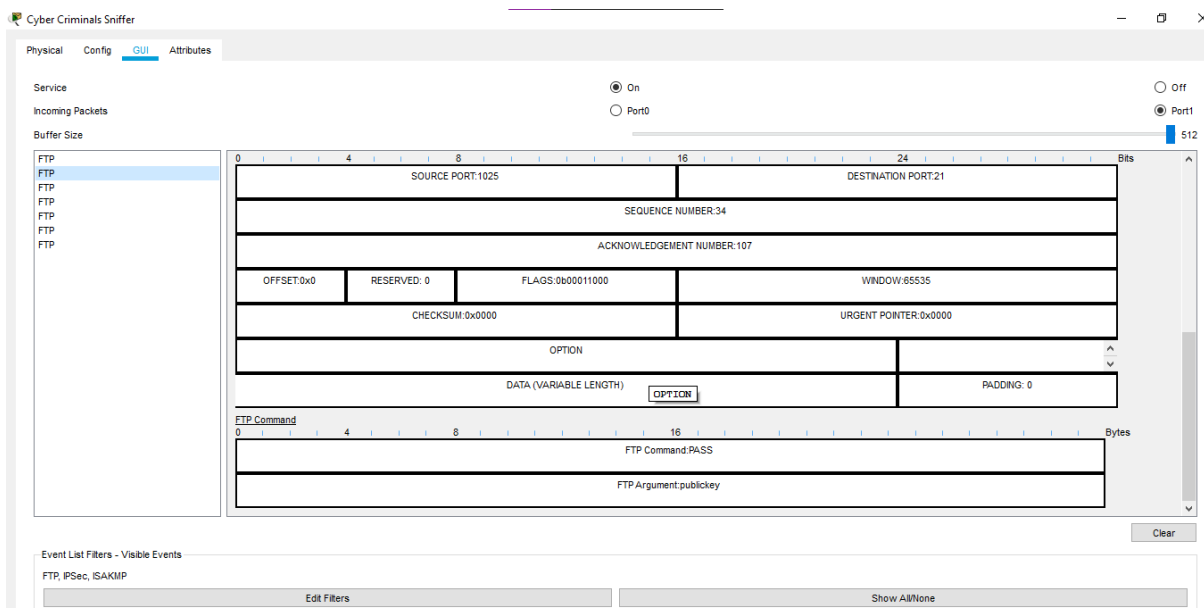

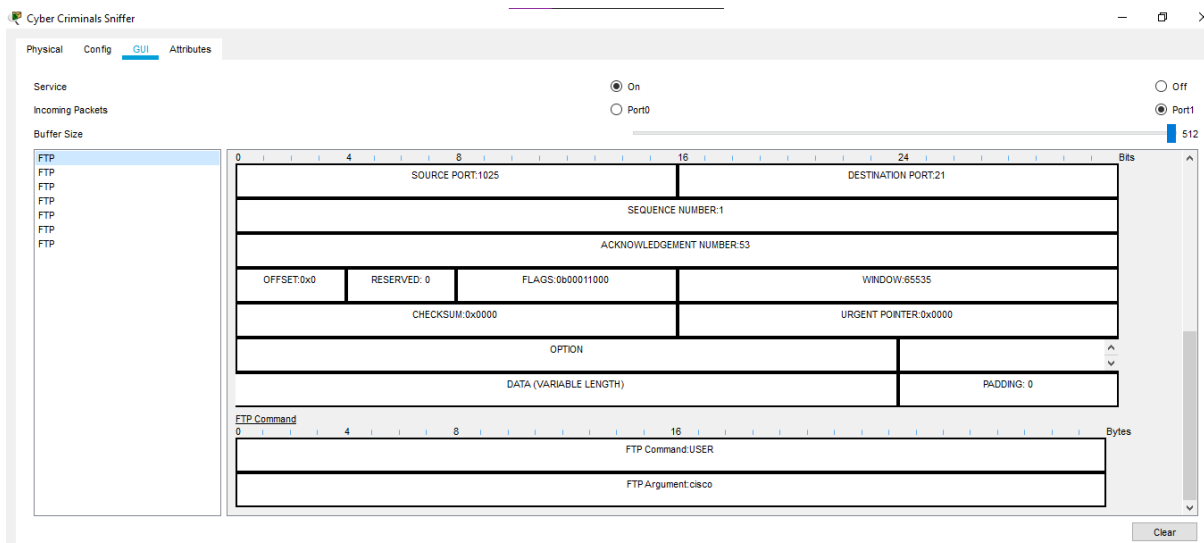

### Step 3: View the traffic on the Cyber Criminals Sniffer.

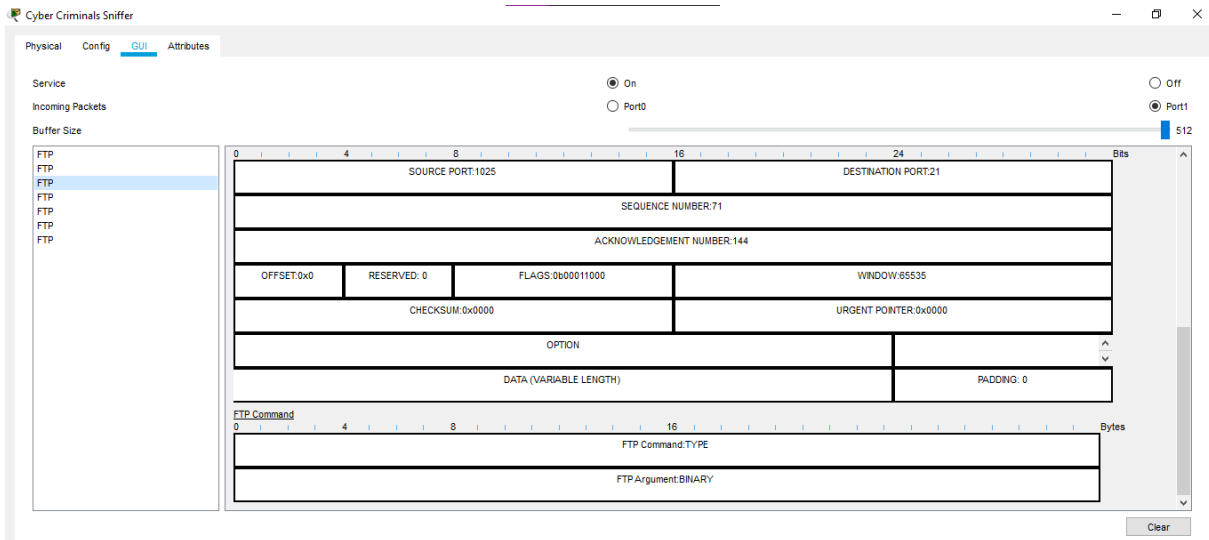

- Maximize the **Cyber Criminals Sniffer** that was previously minimized.
- Click the **FTP** messages displayed on the sniffer and scroll to the bottom of each one.

**What information is displayed in clear text?**

*USER cisco PASS publickey and the filename of PublicInfo.txt*

## Packet Tracer – Configuring VPN Transport Mode

- c. Type **quit** to exit **Public\_FTP** server.

```
C:\>ping 209.165.201.19

Pinging 209.165.201.19 with 32 bytes of data:

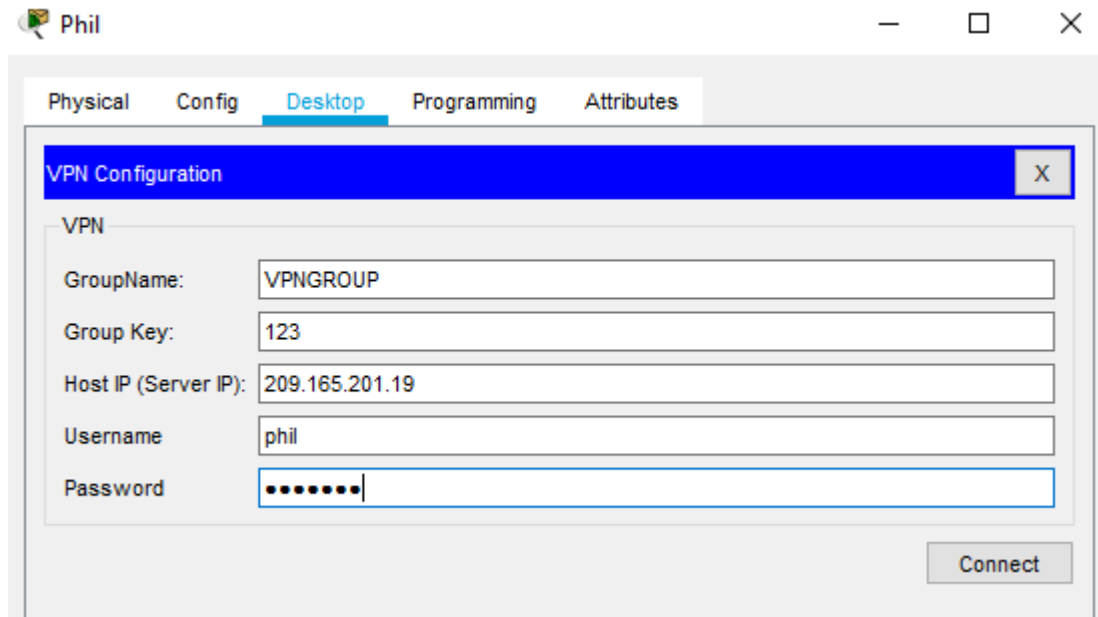

Request timed out.
Request timed out.
Reply from 209.165.201.19: bytes=32 time=1ms TTL=253
Reply from 209.165.201.19: bytes=32 time=2ms TTL=253

Ping statistics for 209.165.201.19:
    Packets: Sent = 4, Received = 2, Lost = 2 (50% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 1ms, Maximum = 2ms, Average = 1ms

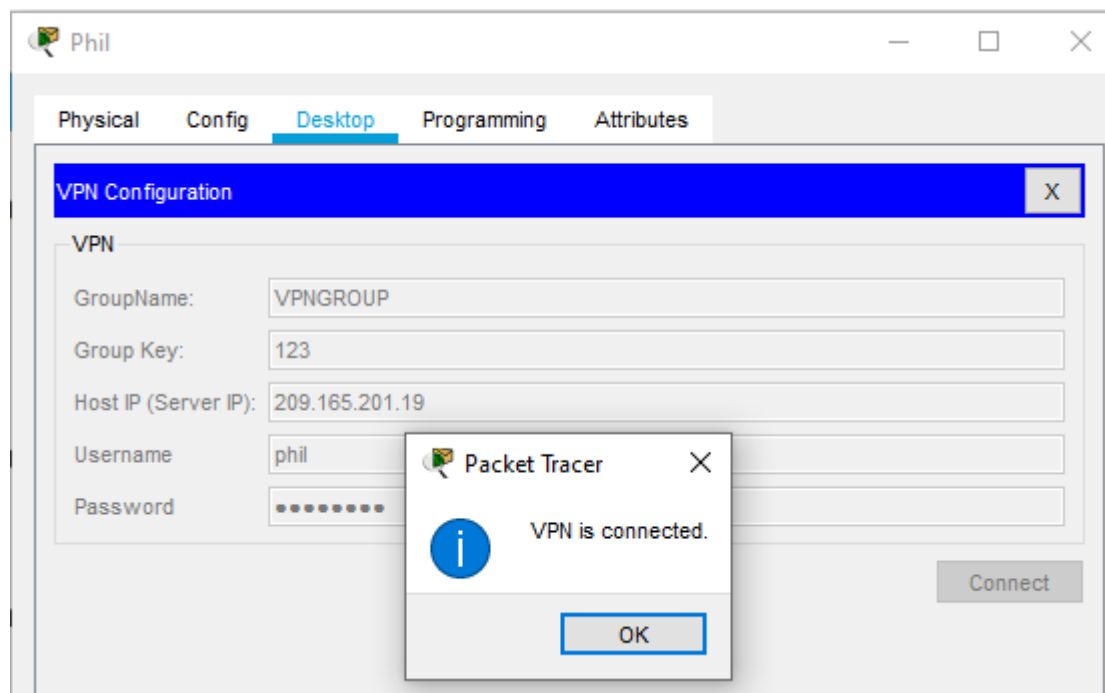

C:\>
```

## Part 2: Configuring the VPN Client on Phil's Computer

- From **Phil's** computer, use the **ping** command and target the IP address of the **Branch\_Router**. The first few pings may timeout. Enter the **ping** to get four successful pings.
- On the **Desktop** tab, click on **VPN**

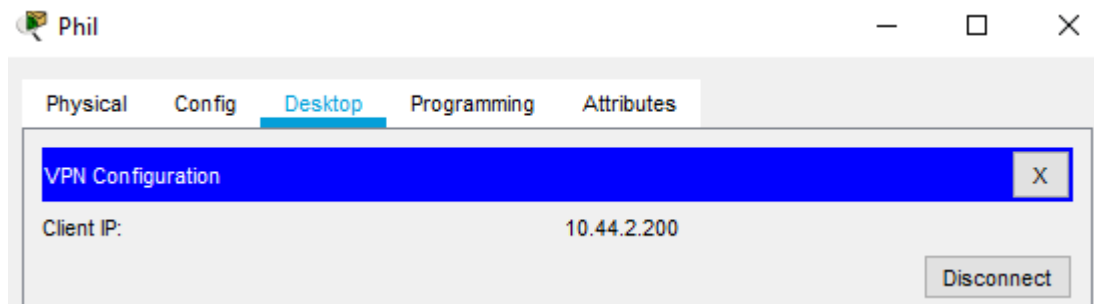

- c. Within the **VPN Configuration** window, enter the following settings:
- GroupName: ..... **VPNGROUP**
- Group Key..... **123**
- Host IP (Server IP):.. **209.165.201.19**
- Username ..... **phil**
- Password: ..... **cisco123**
- d. Click **Connect** and Click **OK** on the next window.

What is the Client IP for the client-to-site VPN connection?

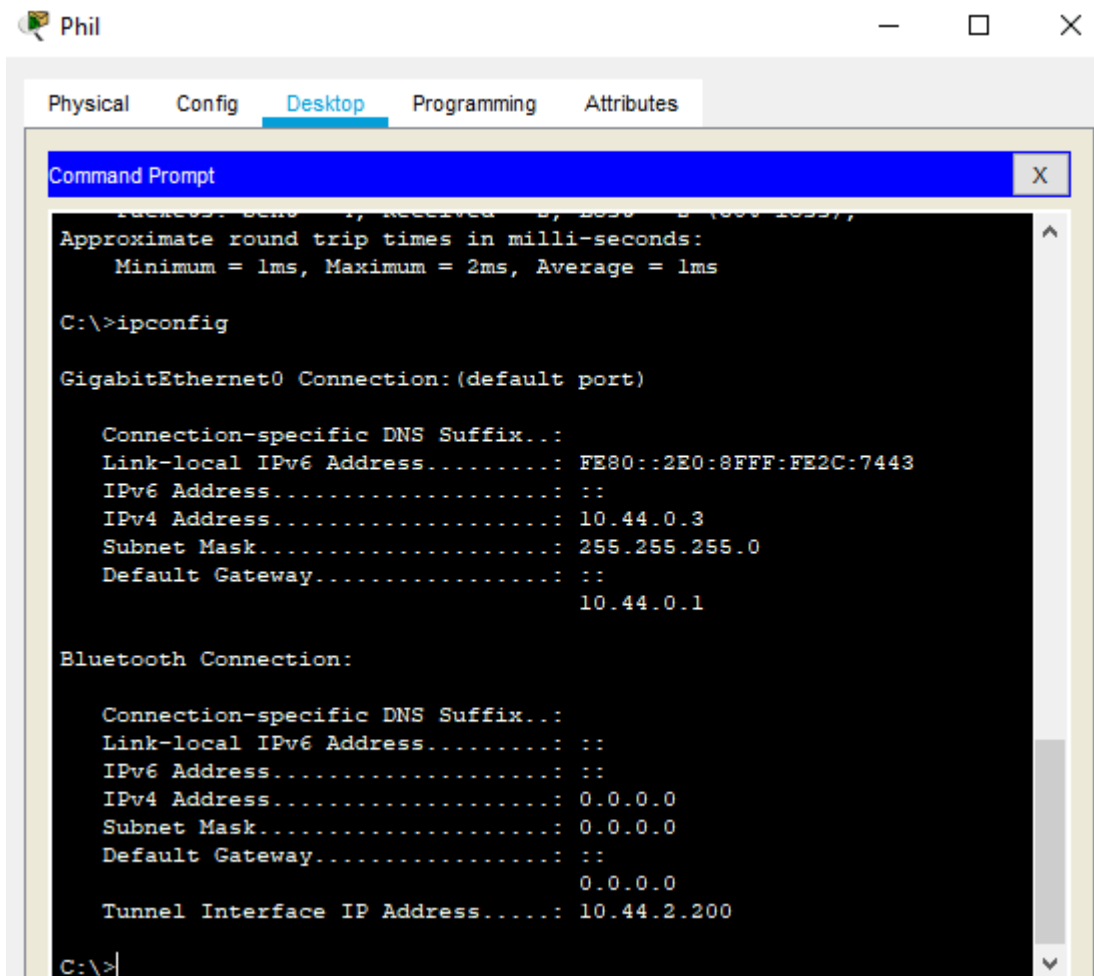

10.44.2.200

### Part 3: Sending Encrypted FTP Traffic

**Step 1: View the current IP addressing on Phil's computer.**

- Within the **Metropolis Bank HQ** site, click **Phil's** computer.
- Click the **Desktop** tab and click on **Command Prompt**.
- Use the **ipconfig** command to view the current IP address of **Phil's** PC.

What extra IP address is now shown that was not shown before in Part 1 Step 2c?

*Tunnel Interface IP Address: 10.44.2.200*

### Step 2: Send encrypted FTP traffic from Phil's computer to the Private\_FTP server.

- Connect to the **Private\_FTP** server at **Gotham Healthcare Branch** by entering **ftp 10.44.2.254** in the command prompt.
- Enter the username of **cisco** and password of **secretkey** to login to the **Private\_FTP** server.
- Upload the file **PrivateInfo.txt** file to the **Private\_FTP** server.

```
C:\>ftp 10.44.2.254
Trying to connect...10.44.2.254
Connected to 10.44.2.254
220- Welcome to PT Ftp server
Username:cisco
331- Username ok, need password
Password:
230- Logged in
(passive mode On)
ftp>put PrivateInfo.txt

Writing file PrivateInfo.txt to 10.44.2.254:
File transfer in progress...

[Transfer complete - 668 bytes]

668 bytes copied in 0.088 secs (7590 bytes/sec)
ftp>
```

☐ Top

### Step 3: View the traffic on the Cyber Criminals Sniffer

- a. Maximize the **Cyber Criminals Sniffer** that was previously minimized.

- b. Click the **FTP** messages displayed on the sniffer.

**Are there any FTP messages displaying the password of internal or the file upload of PrivateInfo.txt? Explain.**

*No, the client-to-site VPN is using encryption and the Cyber Criminals Sniffer cannot decrypt the traffic to view it.*
